Mostafa Essa Ahmed

Backend Developer

As a PHP backend developer, I specialize in creating server-side web apps and APIs for web and mobile apps. I have extensive knowledge of Laravel and can write optimized SQL queries for databases such as MySQL and PostgreSQL. I also develop scalable and robust backend architectures capable of supporting high traffic and large user bases. My skills ensure I can create powerful and high-performing backend systems for web and mobile apps.

WORK EXPERIENCE

Junior Backend Developer php - laravel
Gravity

08/2023 - Present

Projects

- **smart-table:** App for car services and tracking
- **takafulalarabia:** App to display coupons and offers
- **majara:** App for an educational system
- **masaraty:** App for Passenger transportation services ⤢
- **masaraty-website:** Landing page for Masaraty website
- **fresh-food:** App for import and export of foodstuffs
- **yeastar:** Central package customer service system

Junior Backend Developer
InCode Hub

02/2023 - 04/2023   *Cairo , Egypt*

Achievements/Tasks

- **Lemonspaces**: Created high-performing APIs and comprehensive documentation for easy integration by other developers.
- Gipfel: Created flexible API, and designed scalable backend with documentation.

Junior Backend Developer
YallaWeb

02/2022 - 06/2022   *Qena , Egypt*

Tasks

- At Universal Shipping, I integrated the backend and frontend themes for a landing page, ensuring efficiency and user satisfaction.
- At Shantaweb, I collaborated with a team to enhance control panel properties, troubleshoot bugs, and meet requirements.
- At aldalildotcom, I continuously improve the CMS by enhancing its features and improving the display and control panel to enhance the user experience.

EDUCATION

Bachelor of Laws
South Valley University

10/2019 - 10/2022

SKILLS

PHP · Laravel · NodeJs · Laravel Nova · Inertia · Express · Javascript · SQL · Mysql · PostgreSQL · Jasmine · AWS · CI/CD · Docker · Git · MVC · OOP · JSON · Typescript · HTML · CSS · Vue

PROJECTS

E-commerce API ⤢

- My online store API is built using the Express framework and allows administrators to manage categories, products, users, and orders, while customers can browse and order products, and create accounts. The API includes robust authentication and authorization mechanisms to ensure secure data management and is designed to be user-friendly for optimal usability.

E-commerce application ⤢

- I'm building an e-commerce project using Laravel and Vue.js, with a control panel for managing products, categories, orders, brands, site settings, and customers. Payment gateway integration with PayPal is implemented, and the shopping cart functionality is streamlined using the darryldecode/cart package. The project is scalable and optimized for high traffic and large volumes of data.

Placeholder API ⤢

- My animal image API is built using the Express framework and displays animal images in customizable sizes, with optimized retrieval mechanisms for fast delivery. The API includes error handling and caching mechanisms for maximum uptime and a seamless user experience.

Swimming pool club management system ⤢

- I built a club management system with Laravel, a dashboard theme, and web technologies. It manages employees, coaches, training, subscriptions, and tickets. Access controls are secure, and it uses Laravel's built-in task scheduling for efficiency. The goal is to streamline club operations and provide a great user experience.
