PROFILE SUMMARY

Backend Developer (Laravel) with 4+ years of experience building scalable SaaS and high-performance backend systems. Specialized in Laravel architecture, multi-tenant systems, and API-driven product development for production applications. Experienced in designing and rebuilding systems, optimizing database performance, and integrating third-party services such as payment gateways, maps, and messaging systems. Strong focus on clean architecture, scalability, and delivering production-ready solutions for real-world business systems in Saudi Arabia and Egypt.

PROFESSIONAL EXPERIENCE

Digital Servers Company, Backend Developer (Laravel) (Remote, Full-time) 09/2023 – Present | Jeddah, Saudi Arabia

- Built and scaled enterprise-grade SaaS and web platforms using Laravel for production systems in Saudi Arabia.
- Led backend redevelopment of a large-scale transportation platform including trips, drivers, payments, and admin dashboard.
- Built high-availability scalable backend systems.
- Integrated multiple payment gateways (PayTabs, Noon, Al Rajhi) ensuring secure and reliable transactions.
- Designed and implemented multi-tenant SaaS architecture for subscription-based platforms.
- Built flexible notification system (Email, SMS, WhatsApp, Push) using dynamic templates.
- Developed scalable CMS and admin panels for complex business operations.
- Implemented OTP authentication, coupon systems, and Google Maps-based features.
- Improved system stability and performance across multiple production applications.
- Collaborated in code reviews and supported junior developers when needed.
- Maintained and supported production systems ensuring high availability and stability.

In-Code Hub, Backend Developer (Hybrid, Full-time) 02/2023 – 08/2023 | Cairo, Egypt

- Built and maintained API-driven backend systems for mobile and web applications.
- Developed backend features for an event management platform connecting organizers with ushers, including subscription system and event workflow.
- Implemented GPS-based tracking system to verify user presence at event locations.
- Built and documented RESTful APIs for hotel booking system (availability, reservations, user management).
- Integrated secure payment systems for booking and reservation flows.
- Improved API performance, stability, and scalability for mobile applications.
- Collaborated with frontend and mobile teams to ensure smooth integration and delivery.

YallaWeb, Backend Developer (Onsite, Full-time) 01/2022 – 01/2023 | Qena, Egypt

- Built and maintained backend systems for multi-client web platforms including marketplaces, content platforms, and donation systems.
- Developed multi-vendor marketplace backend including product management and admin dashboard functionalities.
- Implemented dynamic product workflows and improved vendor management processes.
- Contributed to rebuilding a large-scale donation platform with modular architecture for scalable feature expansion.
- Designed and integrated custom payment module for secure online transactions.
- Enhanced content management systems including social sharing, media handling, and download features.
- Fixed critical system issues and improved platform stability and performance.

PROJECTS

Masaraty Global — Transportation Platform 📄, (SaaS / Production System)

Rebuilt backend architecture for a large-scale transportation system handling trips, drivers, and payments. Designed admin dashboard and integrated Google Maps for location tracking and PayTabs for payments. Built OTP authentication, coupon system, and flexible notification engine.

Cortra — SaaS Nutrition & Subscription Platform 📄, (SaaS / Production System)

Developed multi-tenant SaaS platform for meal subscription management with delivery scheduling, nutrition tracking, and e-commerce modules. Implemented modular architecture with multiple payment gateways (Noon, Al Rajhi) and advanced admin system for operations and delivery teams.

Majara — Educational SaaS Platform 📄, (SaaS / Production System)

Built scalable education platform supporting multi-level curriculum structure, exams, subscriptions, and gamification system (points, badges, ranking). Developed admin panel for content and exam management with Excel import functionality.

Ensany — Donation Platform (Rebuild) 📄

Re-engineered backend architecture for a large donation platform. Developed custom payment module and improved modular system design to support scalable charity campaigns and integrations.

Lemonspace — Hotel Booking System 📄

Built backend APIs for hotel booking, availability management, and reservations. Integrated secure payment flows and improved API documentation for mobile application consumption.

EDUCATION

Bachelor of Law, South Valley University

2019 – 2022 | Egypt

CERTIFICATES

- PHP Full-Stack Development (Laravel) — Global Dev Gate / NEN — 2019 [🔗](#)
- Advanced Full-Stack Web Development — Udacity — 2022 [🔗](#)

SKILLS

Core Backend: PHP, Laravel, RESTful APIs, OOP, MVC, Clean Architecture, Modular System Design, Authentication & Authorization (JWT, Sanctum, Passport), Queues & Jobs, Event-driven Architecture

Databases: MySQL, PostgreSQL, Database Design, Query Optimization, Eloquent ORM, Redis, Caching

System Design & SaaS: Multi-tenant Architecture, Scalable Backend Systems, SaaS Platforms, Payment Gateway Integration, Third-party APIs

DevOps & Deployment: Docker, CI/CD, Cron Jobs, Task Scheduling, Deployment Automation

Frontend Integration: Vue.js, Inertia.js, Blade, JavaScript, AJAX

Tools: Git, GitHub, GitLab, Bitbucket, Postman, Composer, NPM, Jira, Trello

Testing: PHPUnit, API Testing, Debugging, Performance Testing

LANGUAGES

- Arabic — Native
- English — Professional working proficiency
